

NICOLAS PERRIN

Senior Software Engineer — Java / Spring Boot

nicolas.perrin83110@gmail.com | +33 6 01 20 37 10 | [linkedin.com/in/nicolas-perrin](https://www.linkedin.com/in/nicolas-perrin)

PROFILE

Backend-focused Software Engineer with 5+ years building scalable enterprise systems in Java & Spring Boot, currently designing API integration platforms for Air France/KLM. Strong track record across API design, cloud infrastructure (Azure), and data persistence with PostgreSQL, with additional experience in event-driven architecture (Kafka). Comfortable owning features end-to-end, from backend services to Angular front-ends (reactive forms, component architecture, state management). Open to freelance / contract missions.

PROFESSIONAL EXPERIENCE

Software Engineer (Full-Stack, Backend-focused) — Air France

Sept 2024 — Present

- **Full-stack engineer** in an Agile Product Team, building an internal platform used across multiple engineering groups company-wide.
- **Backend development** with Java 25 / Spring Boot 4 — REST APIs, business services, persistence on PostgreSQL, validation, Spring Security, testing, and CI/CD automation with GitHub Actions, with a focus on clean architecture and scalability.
- **API governance:** designed and configured integrations in Azure API Management, working with architects to expose enterprise services aligned with business workflows.
- **Cloud migration:** migrated a monolithic Spring Boot application to a full Azure-native stack — containerized and deployed on AKS, with secrets managed via Key Vault.
- **Frontend:** built UI features in Angular 21 (Material + Tailwind CSS), handling reactive forms with complex validation, component reusability across the platform, and state management to keep UI consistent with backend data.
- **Production support:** incident analysis and root-cause investigation using Dynatrace and ELK (Elasticsearch, Logstash, Kibana), collaborating with Ops/Middleware teams to deliver fixes under SLA.
- **Built an MCP Server** (Spring AI + MCP Registry) exposing Tools, Resources, and Prompts for internal asset discovery.

Software Engineer — Accenture

Sept 2023 — Sept 2024

- **Backend services** in Java & Spring Boot, containerized with Docker/Kubernetes, for a major travel-sector client.
- **Real-time data pipelines** with Kafka and Spark for traveler behavior analysis and personalized offers.
- **Integrated and scaled NoSQL databases** (MongoDB); implemented a recommendation engine using Azure OpenAI.
- **Contributed to an internal Metaverse project** (Angular + BabylonJS) and streamlined delivery with Azure DevOps CI/CD.

Data Engineer — Virbac

Sept 2020 — Sept 2023

- **Designed and optimized ETL pipelines** with Talend, Python, and PowerShell, integrating data flows from Infor M3 ERP and BigCommerce.
- **Grew into the team's Snowflake specialist:** administered the platform, applied security best practices, and engineered complex SQL transformations for analytics and reporting workloads.
- **Delivered reporting solutions** and interactive dashboards with Power BI and Azure; automated workflows via REST APIs / JSON.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Spring Security, Spring Data JPA, Angular

Cloud & DevOps: Azure (AKS, API Management, DevOps), Docker, Kubernetes, Terraform, Ansible, GitHub Actions, CI/CD

Practices & Tools: Agile/Scrum, Jira, Confluence, REST API design, JUnit/Mockito

Data & Messaging: PostgreSQL, Kafka, Spark, MongoDB, Snowflake, SQL, Power BI

Monitoring & Observability: Dynatrace, ELK Stack (Elasticsearch, Logstash, Kibana)

EDUCATION

Polytech Sophia-Antipolis — Diplôme d'Ingénieur (French Engineering Degree), equiv. Master of Engineering — AI & Data specialization (2020 — 2023)

ISEN Toulon — Classe Préparatoire (Mathematics, Physics, Algorithms) (2017 — 2020)

LANGUAGES

French (native) | English (fluent) | Spanish (professional)
